The Fate of an Indian Drug in Cambodia

The Medical Anthropology Forum is a forum for researchers, students and all those interested in the study of health and illness in different cultural and social settings. We host senior students and scholars who present their current research projects. The aim is to discuss and analyze new theories and themes of Medical Anthropology and to learn more about international developments in the area of culture, health and health care.

In order to obtain two credit points, students must attend the lectures and write summaries (1-2 pages) of four lectures.

For further information contact Erika Pathó: epatho@sai.uni-heidelberg.de
